

What's the Question?

Read the following extract from a newspaper:

Notre-Dame's Bees Keep Buzzing Through Crises

When fire ravaged Paris's Notre-Dame cathedral last year, many presumed that the three colonies of bees living on its sacristy roof had perished. But against all odds, the bees survived the inferno and continued to thrive through the coronavirus lockdown.

"There's nothing wrong with them at all," reports beekeeper Sibyle Moulin, who looks after some 30-45,000 insects in the three hives. "The behaviour of the colonies is perfectly normal."

The beehives are just 30 metres below Notre-Dame's main roof but were untouched by the flames. "The mystery remains," says Moulin. "All that smoke, heat, water..." She kept visiting the bees through the coronavirus crisis. As humans stressed over COVID-19, Moulin reported that the bees were "completely unbothered".

Here are some answers to questions based on the extract. Write down suitable questions that would give you these answers:

1. _____? 7. _____?
Bees have kept buzzing. Yes, it is.

2. _____? 8. _____?
The fire was last year. 30 metres below Notre-Dame's main roof.

3. _____? 9. _____?
They live on the sacristy roof. No, they weren't.

4. _____? 10. _____?
They survived and they thrived. She kept visiting the bees.

5. _____? 11. _____?
Sibyle Moulin looks after the bees. No, they weren't

6. _____?
There are between 30-45,000 insects.
